BOOKTOPIA

We have chosen an online bookshop.

What is the essence of our project? A customer enters the store and makes an order. After making an order, he proceeds to payment. After payment, it is sent to the bank. The bank verifies transactions. If the payment is accepted, it is sent to the administrator. The administrator, after receiving accepted, sends the order to the customer's address using a courier.

TABLES

Admin (admin_id, name, lastname, role)

Online_shop (shop_name, url_website)

Product_category (category_id, c_name)

Product (product_id, category_id, p_name, price)

Customer (customer_number, customer_name, customer_lname, customer_contact, customer_address)

Order (order_number, customer_number, amount, order_date, product_id)

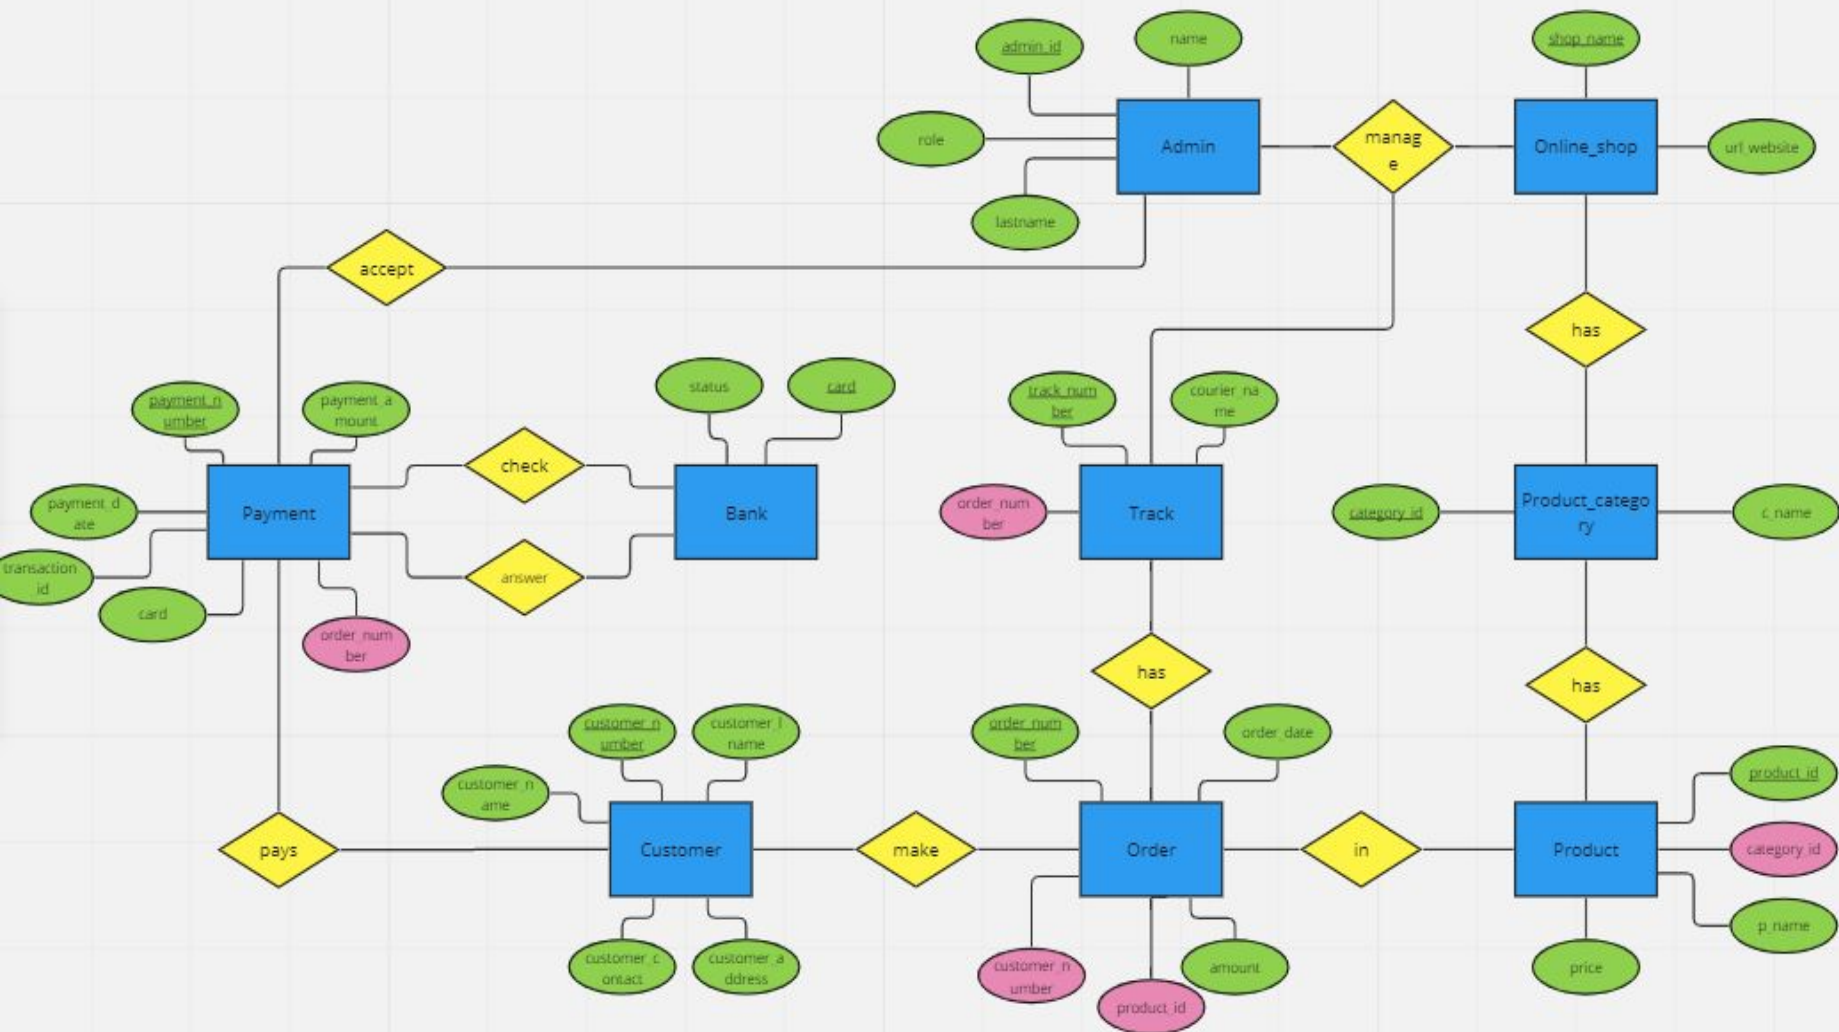

Payment (payment_number, order_number, payment_amount, payment_date, transaction_id, card)

Bank (card, status)

Track (track_number, order_number, courier_name)

ERD DIAGRAM

6 its the number of rows.

1 row(s) inserted.

0.08 seconds

```
CREATE OR REPLACE PROCEDURE
determine_rowss( c_number IN NUMBER ,
status Varchar2)
IS
row_insert INTEGER;
BEGIN
Insert Into BANK(card , status)
values(c_number , status) ;
row_insert := SQL%ROWCOUNT;
DBMS_OUTPUT.PUT_LINE(row_insert || '
row inserted. ');
END;
```

The screenshot displays the Oracle SQL Developer environment. At the top, the 'SQL Commands' tab is active. The 'Language' dropdown is set to 'PL/SQL', and the 'Rows' limit is set to '10'. There are buttons for 'Clear Command' and 'Find Tables'. Below the toolbar, the SQL editor contains the following code:

```
1 Begin
2   determine_rowss(4400225563528754 , 'accept');
3 END ;
4
5
```

The 'Results' tab is selected at the bottom, showing the execution output:

```
1 row inserted.

Statement processed.

0.07 seconds
